

APPLICATION PROCEDURE FOR FUEL OIL STORAGE TANK
CROWN ZELLERBACH CORPORATION

A. LAY-OUT TANKS

Item 1

2.17 → Snap chalked plumb line from top of tank to bottom starting at foot of spiral stairway. Proceed around tank counter-clockwise on 8'-10" intervals snapping line. Go half way around tank then return to starting point and go clockwise, (the reason for this is that there will be a short spacing which should be at the back of the tank.)

Item 2

Using Template provided, ^{punch} ~~position~~ lay out location of batten studs starting from bottom of tank.

Item 3

Shoot studs on these locations.

NOTE: Since no power is available at tank to recharge battery unit it can only be used for a maximum of 4 hrs. without recharging. Work must be planned accordingly.

Item 4

Start from point midway between two vertical rows of studs and snap plumb line again on 8'-1" center.

Item 5

Starting from point 21 1/2" from bottom of tank, lay out studs on these lines 43 1/2" on center using Template provided.

Item 6

Shoot these studs.

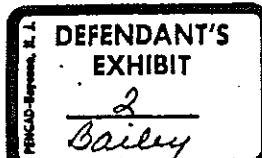

Item 7

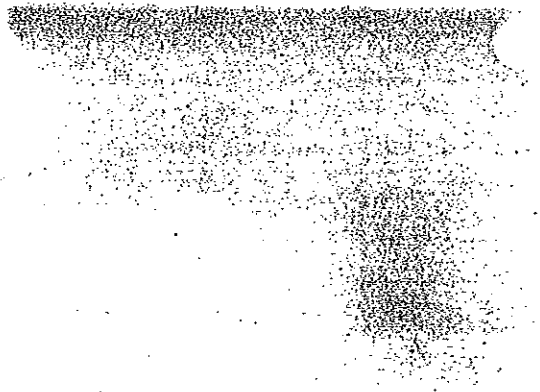

Notify office to call painters.

B. APPLICATION OF INSULATION & CEMENT ASBESTOS BOARD

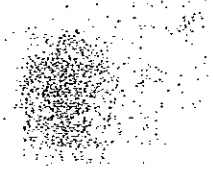

Item 8

After sandblasting and painting is complete, apply bottom course of cement asbestos board and battens without tightening up nuts. Slight insulation in behind these boards. Place S Clips on top of these boards at the rate of 3 S Clips per board and proceed with second course. After this is completed to the top of the tank, place bands and Expand-R strap with 5' of Expand-R Strap per 90' of bands. One band will be placed at the bottom of each sheet and one band goes over the center stud of each sheet. Then tighten up stud nuts. When this is completed caulk all joints which water might otherwise enter, such as around bottom tank angle, manholes and stairway cut-outs.
